AI should not sign its own approval.

Bounded investigation. Independent review.
Recoverable execution.

1.1.0-rc.1 | SYNTHETIC-DATA SANDBOX

One exception. Explicit authority.

An order cannot be fulfilled. The customer asks for a resolution.

01

Refund

Only within the remaining captured balance.

02

Cancel

Only when payment and fulfillment state allow it.

03

Change supplier

Only approved, in-stock alternatives within policy.

Unclear intent or unavailable evidence? Escalate. Do not improvise authority.

The model proposes.
The system controls the effect.

01

Investigate

Four case-scoped
read-only tools.

>

02

Validate

Deterministic rules
and strict schema.

>

03

Review

Different person.
Exact action digest.

>

04

Execute

Recheck grant,
versions and expiry.

No refund tool in the model context. No approval granted by a browser field.

Crash the worker. Keep one effect.

After the commit. Before acknowledgement. Then restart and retry.

1
committed sandbox effect

2
execution attempts

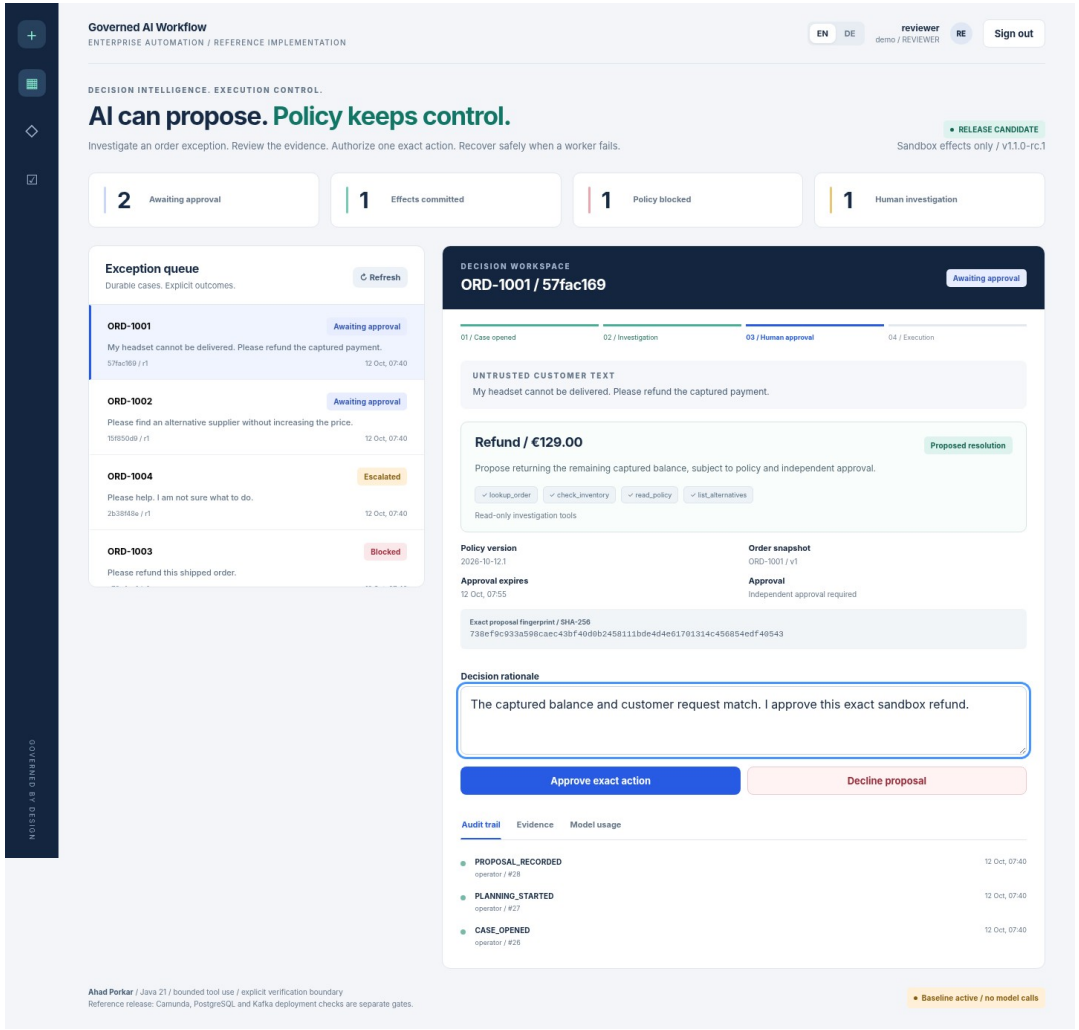

1
same receipt on replay

Verified with an actual standalone worker halt and server restart.
Not a real payment-provider or Camunda fault-injection result.

A review console, not a chat transcript.

Original request.
Exact amount.
Policy and evidence.
Approval expiry.
Audit and receipt.

English / German. Synthetic cases.
Screenshot from the disclosed Chromium DOM harness.

Evidence, with boundaries.

167

passing checks

106

Java contracts

29

Real HTTP / process

9

Browser DOM harness

23

Repository safeguards

Still to verify: native browser networking/CSP, the external stack, and a live model. No invented coverage percentage.

The baseline fails.
We publish where.

33 / 48

exact proposals

40 / 48

acceptable dispositions

48 labelled EN/DE cases. Partial amounts, quoted intent and restrictions expose weaknesses.
Zero live-model calls in this result; no effects executed.

Controlled intelligence. Inspectable engineering.

A narrow reference for workflow, integration and reliable AI systems.

Next gate: real stack acceptance and held-out model evaluation.
